## 2.1 Rate of Change and Limits

One-Sided and Two-Sided Limits:

Sometimes functions will approach different values if you approach from opposite sides. Notation:

right-hand limit:  $\lim_{x\to c^+} f(x)$  approach c from the right

left-hand limit:  $\lim_{x\to c^-} f(x)$  approach c from the left

A function only has a defined limit if the left-hand and right-hand limits approach the same value.

(Offer subject to change - does not include endpoints. Taxes extra

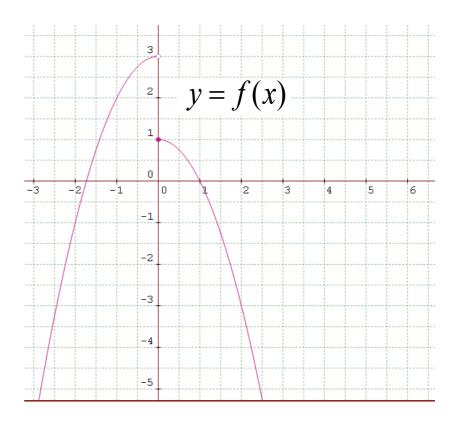

Use the graph to evaluate the following:

$$f(0) =$$

$$\lim_{x\to 0^+} f(x) =$$

$$\lim_{x\to 0^-} f(x) =$$

$$\lim_{x \to 0} f(x) =$$

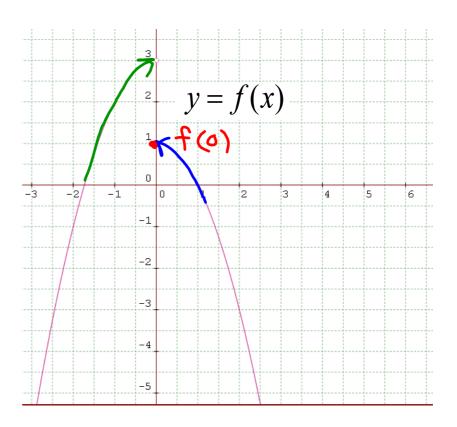

Use the graph to evaluate the following:

$$f(0) =$$

$$\lim_{x\to 0^+} f(x) =$$

$$\lim_{x\to 0^-} f(x) = 3$$

$$\lim_{x\to 0} f(x) = \bigcap \bigcup \sum$$

## Evaluate the following:

$$\lim_{x\to 4^+} \quad \text{int}(x)$$

$$\lim_{x\to 4^-} int(x)$$

$$\lim_{x\to 4} \quad \operatorname{int}(x)$$

Evaluate the following:

$$int(4) = 4$$

$$\lim_{x \to 4^{+}} int(x)$$

$$\lim_{x \to 4^{-}} int(x)$$

$$int(39) = 3$$

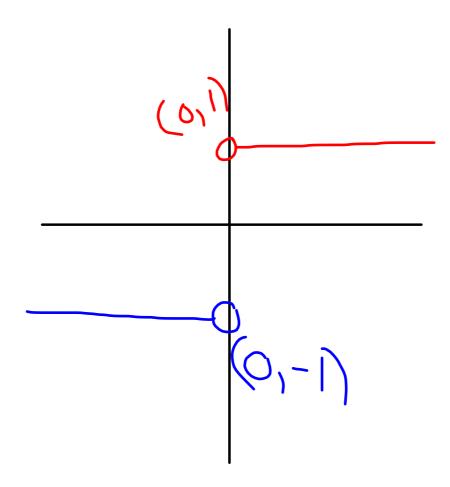

$$int(3,99) = 3$$

$$\lim_{x \to 4^{-}} int(x)$$

$$D[[(5,0)] = 4]$$

$$\lim_{x \to 0} \frac{|x|}{x} = DDDE$$

$$\lim_{x \to 0} \frac{|x|}{x} = I$$
